Next generation of Online Communication

09/05/2008 - The Communications Client is the latest soft-client application from Basis Audionet allowing users to experience a whole new dimension of online communication. Driven by an intuitive user interface, the Communications Client combines VoIP and Video telephony, Instant Messaging and many more in a single portable application.

This new soft-client makes communication as easy as it should be: it incorporates https-tunneling to provide seamless user functionality independent of access technology and common network firewall settings. Thus, allows their new soft-client to be used in virtually any IP network environment, ranging from enterprise to residential to internet café, creating value and cost savings made possible by enabling real-time audio and video communications.

“Again Basis Audionet sets high standards in IP communications”, says Rüdiger Kaun, CEO of Basis Audionet. “With the new soft-client we introduce another innovative, leading-edge product offering a range of embedded, value-added applications. The software includes services like video conferencing, advertising server integration, SMS/MMS and VoIP telephony – that makes it an attractive package for our customers.”

Ideally suited for carriers, Internet Service Providers (ISPs), Resellers, MSOs and providers of social networking communities, this exciting new way of

Worldwide Voice

communications will offer an additional revenue stream while increasing customer retention for the provider.

In addition to its extensive range of call, contact, instant messaging and presence management features, the Communications Client includes even more components such as:

- Zero-touch configuration
- HTTPs tunneling technology
- Advertising server integration
- Web based Self Care Portal

Basis Audionet will showcase its newly released Communications Client at the CommunicAsia 2008 tradeshow in Singapore, June 17th-20th 2008, German Pavilion in Hall 5.

About Basis Audionet

Basis Audionet is a global telecommunications leader, providing IP services to resellers, carriers, ISPs and MSOs. With a proven track record of success in IP, mobile, and land-line communications integration, the company provides solid system implementation expertise. Voice chat, FMC, signaling, switching, media gateway and application server solutions are just a few of the many areas in which Basis Audionet specializes. Offering a broad palette of customer relations management services, while combining core competencies in IT and value-added IP Communications solutions development, Basis Audionet is dedicated to excellence and committed to quality service, as your technology partner of choice.
